Gnome Venture: World / Town / Stops UI Consolidation Plan

Scope: World (Map, Gather, Shops, Travel), GPS, Where to next, Land for Sale, Seasons, Town, rest stops (Do / Stop villagers / Stop), main stops. Goal: new style, easy on phone and desktop, fewer duplicate surfaces. Paths are under `game/`.

1. Current state

- **world.php** (382 lines): tabs Here, Map, Gather, Shops, Travel; Rest stop is a link out to town.php. Here holds the place card, road board, Where to next, go-tiles, Seasons fold, Land for Sale.
- **GPS**: includes/destination.php (`dest_panel`, `dest_resume_html`); fast travel linked from 3 places.
- **town.php** (468 lines): main stop tabs Square, Villagers, Passport, Orders. **Bug:** line 51 always redirects Villagers to villagers.php, so the inline view (lines 377-452) is dead code.
- **Rest stop** (includes/local.php, stops.php, stop_folk.php): tabs Do, Stop villagers, Stop, with a separate chip row above.
- **style.css**: 5,272 lines, one file, breakpoint 720px. Unused scene art (`stop-*.png`, `map-*.png`) exists.

2. Overlaps to merge

- Navigation x3 (Where to next, dest_panel, chips) into one **Go** surface; fast travel becomes a section of Go plus a Map pin action.
- Villagers x3 (local_folk_card, dead town view, villagers.php grid) into one component; main stops behave like rest stops.
- Passport in 3 places: keep in Town/Me, one link from stops.
- World Here place card duplicates the stop header: Here becomes just the current stop.
- Gather has tab, tile and off-path box: one Gather tab.
- Seasons and Land for Sale loose in World Here: move to the stop's Stop tab.
- Mossbottom hub chip repeated everywhere: one place switcher.

3. New navigation

- **World** tabs: Go, Map, Gather, Shops.
- **Rest stop** tabs: Do, Villagers, Stop. **Main stop** tabs: Square, Villagers, Shops, Stop (Stop = Passport, Orders link, Seasons, Land, plaque).
- **Phone (720px and under)**: sticky bottom tab bar with badges, slim header with GPS chip, folds (details) for sections, 44px tap targets.
- **Desktop**: top tabs plus a right column with Go/GPS status and villager summary.
- Context bar World / Here / Mossbottom replaces the chip rows.

4. Shared components (includes/place_ui.php)

- `villager_list_html` (rest + main stops + villagers.php), `place_tabs_html`, `place_header_html`, `go_panel_html`, `season_fold_html`, `land_card_html`.
- One `.place-*` / `.vcard` CSS block using the art-style-guide Part C tokens.

5. Phases

- **1. Extract, no visual change** (low risk): move World Here/Seasons/Land/Go and town folk logic into functions. Run tests/scene_smoke and roads/walk/explore scripts.
- **2. Villager component** (medium): rest stops first, then main stops; remove the line 51 redirect. Risk: errand forms post to town.php but villager panel posts to villagers.php; keep both working.
- **3. Unified place tabs**: new Stop tab; keep old `?t=`, `?view=`, seasons.php URLs as redirects.
- **4. World restructure**: Go replaces Here + Travel; redirect `?tab=travel`, `?go=`. Check incoming links (index.php:126, shop.php:103, marketday.php:38) and gather.php's `$back` regex.
- **5. Visual pass**: felt/stitch styling, scene art, mobile bar, desktop column; test light/dark and CSP (no inline styles).
- **6. Release**: bump version, CHANGELOG, zip. Mockup to Josh before phases 2-5.

6. Decisions needed

- Main-stop Villagers: only who is in town now (global grid moves to Almanac/Me), or both?
- Is "Here" a top-level menu entry, and is a phone bottom tab bar OK?
- Bring the Orders tab back into town (moved to jobs.php in 1.7.2)?
- OK to use the unused stop-*/map-* art on place headers?
- Mossbottom: always-reachable switcher, or a normal main stop?
- Land for Sale: per stop, or on the Garden page?
